## TOTAL HARVEST

### HIT ALL TIME HIGH!!!

Through continuous improvement, we've implemented our latest feeding SOP at Pantai Merdeka Farm, and the result is stunning !

Our harvest output improved significantly after implementing the new SOP (as shown above), we manage to improve the output for **P3** from **3874kg to 8425.5kg**; an increase of **117%**! Other ponds also show significant improvement compared to previous cycles.

**"A WORD FROM  
OUR CHIEF  
OPERATION  
OFFICER" -  
KENNETH CHEW**

We are always trying to find ways to improve our yield, through comprehensive data collection we were able to archive this new milestone.

Our data shows there are 2 important areas to improve our yield, one is seed supply and the other significant area is the feeding.

For our seed, we are working closely with 2 of our seed suppliers to ensure the best quality seed are delivered to all of our farm, we also set up very strict incoming process to ensure only the best seed are stocked.

On our feeding SOP, we did some improvement to our feeding quantity, however the biggest improvement is on our feeding schedule, the newly improved schedule allowed our prawns to grow bigger with lesser feed while taking care of water quality at the same time.

This results are truly amazing and I am proud of our operation team !

# SUPPLY OF SHRIMP FRY UNSTABLE

We have been experiencing shortage and delay on our shrimp fry since early **August 2022** due to some internal issues on the supplier side.

## *SOLUTION*

Fortunately, we had been actively sourcing for second seed supplier and we were able to switch to our second source immediately without causing much delay. This seed supplier is also a reputable company with their own state-of-the-art hatchery.

## WHITE SHRIMP (VANNAMEI) FARMING WITH CPF COMBINE SYSTEM

As part of our plan to diversify into **Pacific White Shrimp (Vannamei)**, our company is engaging with CP Malaysia to diversify our farming with **CPF Combine System**.

The CPF Combine System will allow us to farm Vannamei in a Super-Intensive System, giving us higher yield on smaller land area.

This will open up many opportunities for FDI in terms of Marketing and Expansion.

Stay Tune for more updates from our FDI Group.
